Seamless steel pipe for machining is one of the most commonly used types of seamless steel pipe. Seamless steel pipes have hollow sections and no welds from beginning to end. Compared with solid steel such as round steel, seamless steel pipe is lighter in weight when the bending and torsional strength is the same. It is an economical cross-section steel and is widely used in the manufacture of structural parts and mechanical parts, such as oil drill pipes, bicycle frames, and Steel scaffolding used in building construction, etc.
